OFFER A

KIT A: TPMSKIT-A

TPS01 I-SENSOR 433mhz - Clamp In x 5
 TPS03 i-SENSOR 433MHZ - Snap In x 5
 TPT14 TPMS hand tools set in case x 1
 TPT15 i-SENSOR Programming Tool x 1 **FREE**

(Buy Kit and Save €85)

+ FREE i-SENSOR (Valued €499)

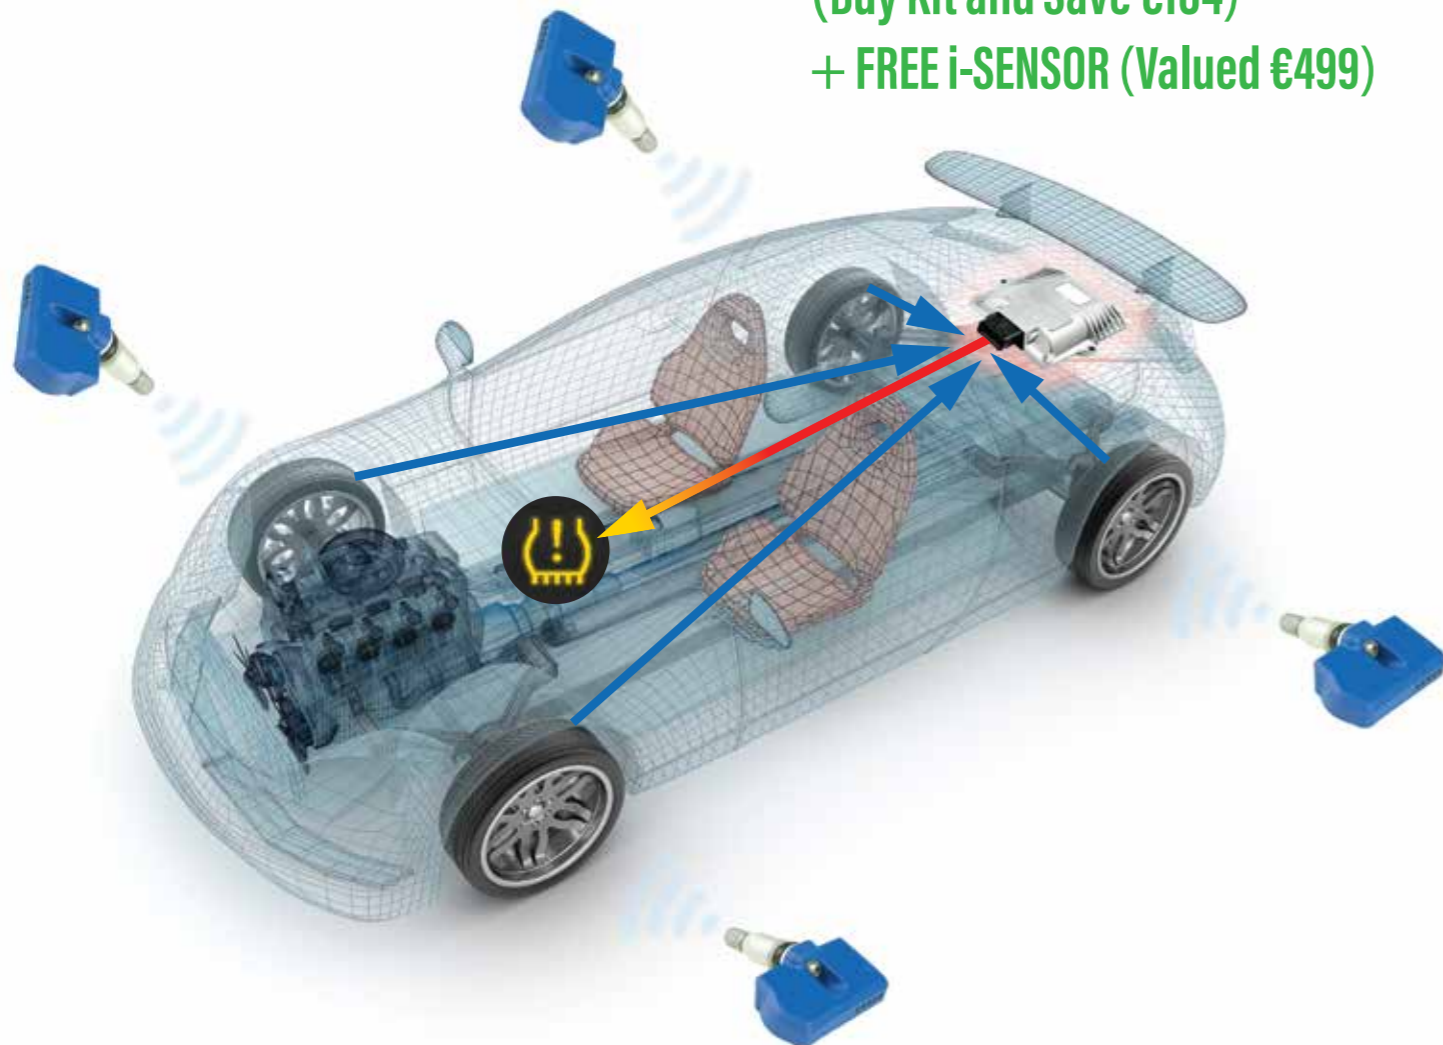

OFFER B

KIT B: TPMSKIT-B

TPS01 i-SENSOR 433mhz - Clamp In x 5
 TPS03 i-SENSOR 433MHZ - Snap In x 5
 TPT14 TPMS hand tools set in case x 1
 TPK11 TPMS Kit Box A x 1
 TPK12 TPMS Kit Box B x 1
 TPT35 TPMS valve tool x 1
 TPT15 i-SENSOR Programming Tool x 1 **FREE**

(Buy Kit and Save €104)

+ FREE i-SENSOR (Valued €499)

i-sensor
 INTELLIGENT TPMS SOLUTION

Blank i-Sensor: TPS01/TPS03

The i-Sensor blank is a high quality sensor that can be programmed to cover over 97% of all vehicles fitted with direct TPMS in the European market.

- A single sensor can effectively replace 106 of 109 OE sensors.
- The tyre bay can keep a small stock holding ready to replace nearly all OE sensors on demand.
- Eliminates downtime in the workshop, as there is no waiting around for the product reduces the customer waiting time, making tyre work "fast-fit" again with no need for the customer to make a second visit for the job to be finished.
- Keeps costs to a minimum as a single sensor costs the same, whether it is for a popular family hatchback or an exclusive supercar.
- Replacement black coloured valve stems are also available for aesthetic purposes.

TPMS SERVICE KITS: TPK11/TPK12

Servicing TPMS is a much overlooked, but important part of TPMS maintenance.

As with all types of tyre valves it is important that the integrity of the air seal is never compromised. A degraded valve may simply cause a slow air leak which can be easily rectified, but there are many more potentially catastrophic scenarios that could occur either through complete valve failure or from the resulting low pressure in a leaking tyre.

Whenever you are simply breaking the bead on tyres on wheels fitted with TPMS it is recommended to perform a service on the sensor, replacing the sealing and fixing components in turn prolonging the life of the valve component.

More and more valves now also have replacement valve stem components so that damaged valve stems do not always require a complete sensor replacement. We now have TPMS service kit assortments alongside our comprehensive range of individually and bulk packed service kits for all OE TPMS sensors and i-sensors, so there is no reason why sensors should not be maintained correctly. Our TPMS hand tools are also designed to assist the correct handling of the sensors, helping to ensure tight fitment and reduce the chances of accidental damage.

TPMS TOOL KIT: TPT14

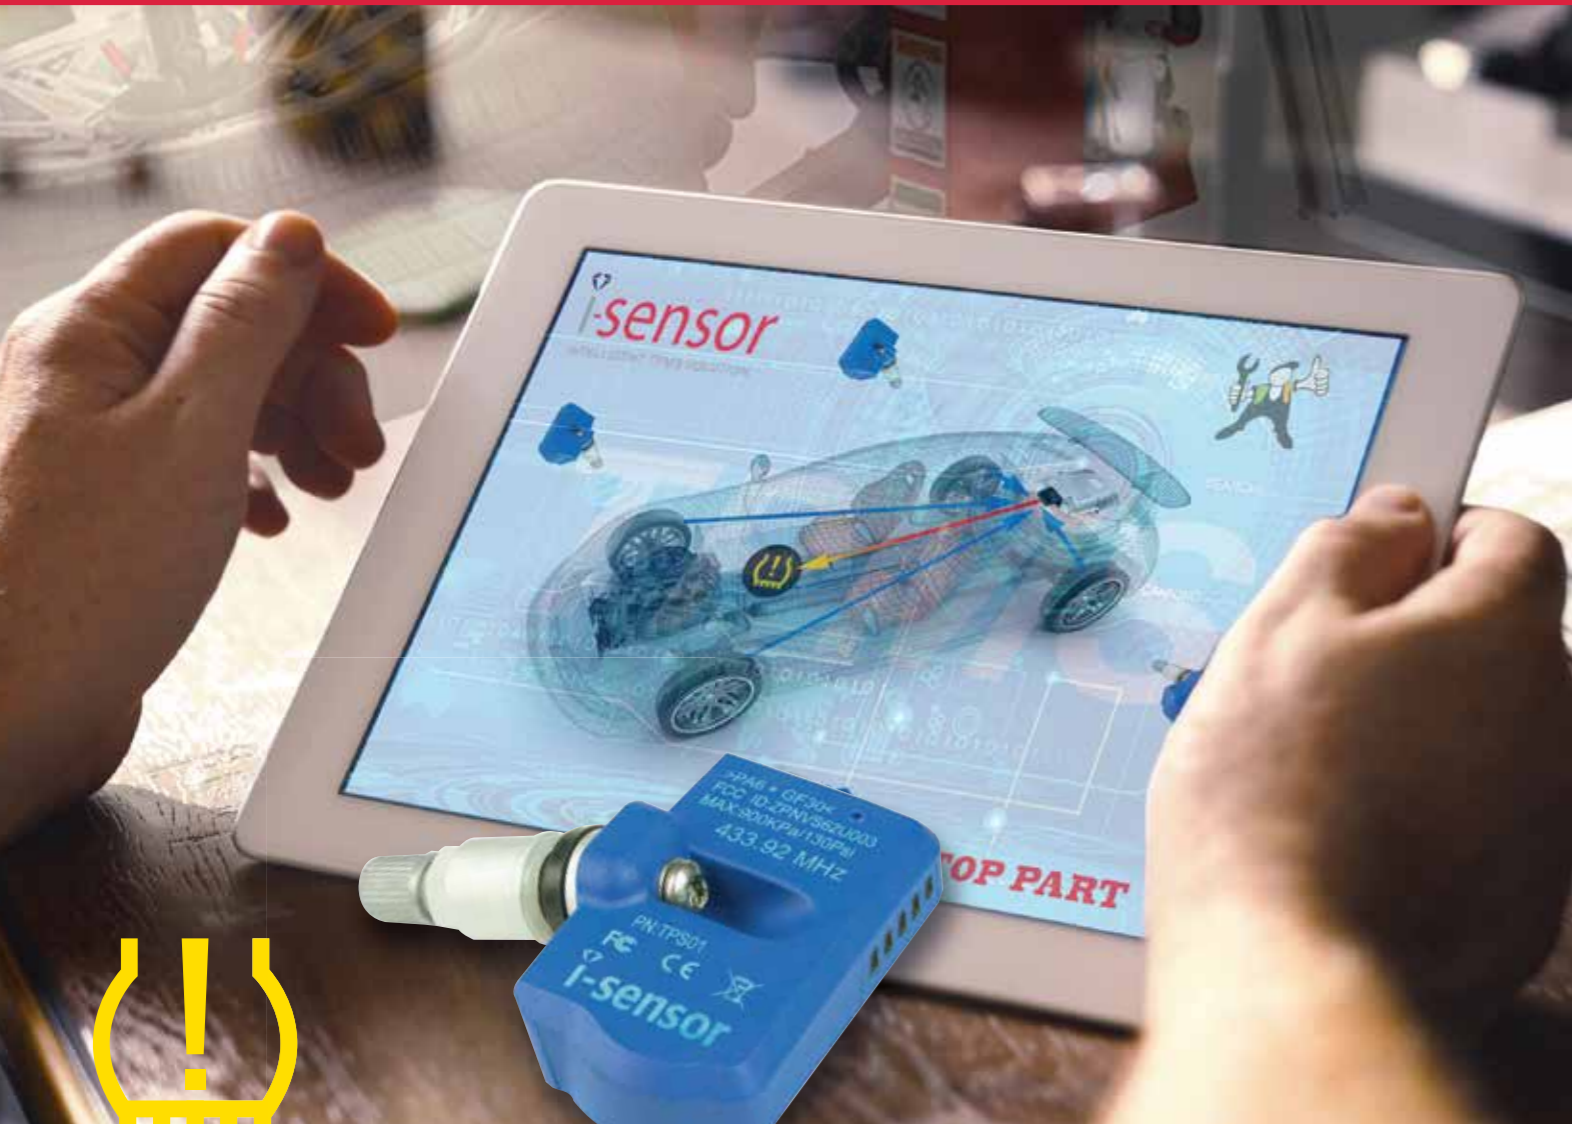

Don't forget that ALL TPMS fixing components (Nuts & Screws) must be tightened to a specific torque setting to ensure correct function and safe fitment.

It is important in any job that the right tools are used, so our expert team have developed a comprehensive TPMS tool kit to ensure tyre technicians are able to handle and fit all TPMS sensors safely and correctly.

We provide torque information on all of our TPMS service kit packaging to assist you when fitting sensors back to the wheel.
